

Axiu AX-O7s 7+7 Watt Slave Amplifier

The AX-07s is a low cost solution for low power audio zones and is the perfect partner for sub zones on the Axiu AX-452AV Multi-Zone amplifier.

A preamplifier Zone in an AX-452AV can be set to 'independent mode'. In this mode the preamplifier Volume, Power and Muting can be independent to the Multi-Zone amplifiers primary speaker output.

The illustration below is a typical installation using the AX-07s to power speakers in a Master Bath, Sub Zone where the Vantage AX-452AV provides independent preamplifier outputs for each zone as well as the power and amp on/off trigger.

The AX-450AV preamplifier output has additional extra gain for driving amplifiers with low sensitivity.

Features and Benefits

- o 12VDC jack for AX450 amp or independent power supply
- o Upto 7 watts per chanel depending on the povesupply
- o Amp on connection. The AX-07s is in an "always on" mode but it can be triggered "off" with 0Volts, ie 12vdc is on 0vdc is off.

- o Plug terminal block connections to Axiu Mutli-Zone amplifier
- o Dimensions: Width 58mm (2.28")
Depth 143mm (5.63")
Height 22mm (0.86")
