

INFUSION MEDIA CLIENT

Software

The software that powers Vantage in-wall touchscreens is now available for Windows OS tablets and PCs. InFusion Media Client software, the Touchscreen Designer and the IMC-USB key together empower the Vantage dealer to easily deliver elegant interface solutions for any project.

Gain real time access to lighting, AV systems, shades, security cameras, climate control, energy management and more. With a Windows OS tablet device, users can seamlessly communicate with a Vantage InFusion control system via Wi-Fi or a hard-wired network connection.

Adding a Windows OS tablet to any Vantage InFusion system can be done in four simple steps:

Step 1: Purchase the IMC-USB from Vantage for each Windows OS tablet or PC to be used in the project, and plug the IMC-USB into that device.

Step 2: Download the InFusion Media Client software from the Vantage Dealer website and install it onto each Windows OS device.

Step 3: Create a touchscreen interface in Design Center's Touchscreen Designer software. Add widgets for quick media management.

Step 4: Export the design over the network to the Windows OS device.

Product Highlights

- Allows a Vantage interface on Windows OS devices
- Uses Design Center and Touchscreen Designer to create the user experience
- Fully customizable and compatible with touchscreen library templates
- Easy-to-install USB key (IMC-USB) with a low-profile top
- Works on Windows XP™, Vista and 7 (32-bit and 64-bit supported)
- Preprogrammed widgets allow quick and reliable control of:
 - Music libraries
 - Photo galleries
 - Web browsers
 - Security cameras
 - Weather forecasts
 - Energy Management meter
